FOOD SCIENCE INNOVATION HUB

Innovating Food, Empowering Students, Feeding the Future

Our Services

- **Product Development**
- **Sensory Testing**
- **Shelf-Life Testing**
- **Microbiological Testing**
- **Statistical Analysis & Modeling**
- **Analytical Chemistry**
- **Document Preparation**
- **Multi-spectral and Hyper-spectral imaging**

About the Food Science Innovation Hub

The Food Science Innovation Hub brings together researchers, students, and industry partners to advance basic and applied research that strengthens the food sector. Our interdisciplinary team—Food Science, Animal & Dairy Sciences, Agricultural & Biological Engineering, Agricultural Economics, Biochemistry, Horticulture, Plant & Soil Sciences, and Poultry Science—works collaboratively to generate new ideas and practical, research-driven solutions for the food industry.

By integrating diverse expertise, the Hub supports innovation, education, and workforce development. We create opportunities for student entrepreneurship, real-world problem solving, and industry engagement, ensuring graduates are prepared to apply scientific knowledge in business and production environments.

The Hub fosters a creative, collaborative environment that drives progress across the food system, serving as a valuable partner for companies seeking fresh insights, trusted expertise, and forward-looking solutions.

Mississippi State University is an equal opportunity institution.
